

Adipotide Dosing Chart

An investigational peptide designed to destroy the blood vessels feeding white fat. Studied mainly in animals, with early human work halted. Commonly discussed doses: 32 mg–66 mg. Figures below derive from the small human and primate studies, expressed per kilogram of body weight. Shown in micrograms for calculator consistency. There is no approved or established dose.

FDA STATUS

Not FDA-approved for any use. Adipotide is an investigational compound; human development did not proceed past early studies.

5 mg vial — units to draw (U-100 syringe)

Water added	mg/mL	32 mg	66 mg
1 mL	5	—	—
2 mL	2.5	—	—
3 mL	1.67	—	—

10 mg vial — units to draw (U-100 syringe)

Water added	mg/mL	32 mg	66 mg
1 mL	10	—	—
2 mL	5	—	—
3 mL	3.33	—	—

"—" means the draw exceeds one syringe at that concentration. Interactive calculator for any combination: thelastpeptide.com/peptides/adipotide

Adipotide dose figures are commonly discussed reference information with no approved labeling unless stated above. The Last Peptide is an educational reference and sells nothing. Dosing figures shown here are commonly discussed reference information, not prescriptions or medical advice. Many peptides listed are not FDA-approved. Talk to a licensed clinician before using any peptide.
