

Cerebroprotein Hydrolysate Dosing Chart

A brain-derived peptide mixture similar to Cerebrolysin, used in some countries for neurological conditions. Not approved in the US. Commonly discussed doses: 10 mg–60 mg. Dosing in countries where it is used is by milliliters of the preparation, given by injection or IV. Figures shown are total milligrams in micrograms. It is administered clinically, not as a home reconstitution.

FDA STATUS

Not FDA-approved in the United States. Cerebroprotein hydrolysate is used in some other countries but is not FDA-approved, and its evidence base is limited and contested.

10 mg vial — units to draw (U-100 syringe)

Water added	mg/mL	10 mg	30 mg	60 mg
1 mL	10	100 u	—	—
2 mL	5	—	—	—
3 mL	3.33	—	—	—

30 mg vial — units to draw (U-100 syringe)

Water added	mg/mL	10 mg	30 mg	60 mg
1 mL	30	33.3 u	100 u	—
2 mL	15	66.7 u	—	—
3 mL	10	100 u	—	—

"—" means the draw exceeds one syringe at that concentration. Interactive calculator for any combination: thelastpeptide.com/peptides/cerebroprotein-hydrolysate

Cerebroprotein Hydrolysate dose figures are commonly discussed reference information with no approved labeling unless stated above. The Last Peptide is an educational reference and sells nothing. Dosing figures shown here are commonly discussed reference information, not prescriptions or medical advice. Many peptides listed are not FDA-approved. Talk to a licensed clinician before using any peptide.
